12.2cm - 13.0cm	4.8" - 5.2"	L
13.0cm - 13.8cm	5.2" - 5.5"	XL/XXL

Table 1

Using the Measurement Tool

If you don't know your knee cup measurements, you can use the measurement tool that is supplied with the knee brace. In the standing position, hold the measurement tool parallel to the ground and slide it from the front towards the back over the central part of the knee. You need to find the maximum width of your knee. The arrow will point towards a knee brace size that should fit your knee cup width. This should only be used as an indication and we strongly recommend you try on a knee brace to ensure you purchase the correct size.
