Technical Standard:	EN ISO 13688:2013 FprEN 17092-3 (version 05/2018)	Protective clothing – general requirements Protective garments for motorcycle riders – Part 3: Class AA garments – Requirements
Intended use:	Motorcycling: preventive use – correct fitting and positioning of the inner protections are essential	
Size range:	Men's sizes: from S to 2XL (full indications on the Information Notice)	
Technical File:	DC-9724	
Test report:	RCT n° 3736059/E	

Functions and performance levels: The garment offers limited protection against mechanical risks arising from impact and abrasion in case of a fall while participating in motorcycling activities: CE-Certified incorporated impact protectors provide strengthened protection. This PPE item has reached the following performance:
Class AA (*) = Medium-duty protective garments: the second highest level of protection, against the risks of the greatest diversity of riding activities. These garments are expected to have lower ergonomic and weight penalties than AAA garments, which some riders will not find acceptable for their specific riding activities. Protective function is linked to the correct fit of the garment – also the inner impact protectors must be kept in their place: this falls within the responsibility of the user.

(*) = The applied Technical Draft document currently provides different levels of protection for garments including protectors/shells: from class AAA (highest level of performance) to class AA (medium level) to class A (lower level); - class B for garments not including protectors / shells = just abrasion protection; - class C for Impact protector ensemble garments.
